TECHNICAL SKILLS

Languages:

- Python
- C++
- JavaScript
- SQL

Backend & APIs:

- FastAPI
- Flask
- REST APIs
- Webhooks

AI & ML:

- LLMs / NLP
- Mistral AI
- Scikit-learn
- NumPy / Pandas

Tools:

- Git & GitHub
- Linux / Terminal
- Netlify

INTERPERSONAL SKILLS

- Problem Solving
- Team Collaboration
- Communication

LANGUAGES KNOWN

- English
- Hindi
- Punjabi

EDUCATION

B.Tech – Artificial Intelligence

2025 – Present

Currently pursuing first year. Focus on AI systems, backend engineering, and applied ML.

PROFESSIONAL SUMMARY

First-year AI student passionate about building intelligent backends and deploying real-world AI systems. Focused on the intersection of clean software architecture and powerful language models — from autonomous agents to conversational AI. Comfortable working across the full backend stack with Python, FastAPI, and cloud/local LLM integrations.

PROJECTS

1. Jarvis – Autonomous AI System Agent

Python · Mistral AI · FastAPI · Automation · AI Agent

- Designed an LLM-powered agent capable of interpreting user commands, planning multi-step actions, and executing them through integrated system tools and APIs.
- Built a modular tool architecture enabling the agent to call OS commands, web APIs, and automation scripts dynamically.
- Integrated Mistral AI as the reasoning engine with a custom schema and response manager for structured outputs.

2. WhatsApp AI Chatbot using Twilio

Python · Twilio API · Webhooks · FastAPI · REST APIs

- Deployed a production chatbot on WhatsApp by integrating Twilio webhooks with a FastAPI backend for real-time message handling.
- Implemented AI-generated response pipeline processing inbound messages through language model inference and returning structured replies.
- Demonstrated scalable conversational AI deployment on a real-world messaging platform with 24/7 uptime.

3. API Integration & Backend Services

FastAPI · Flask · REST APIs · Python · JSON

- Built a backend platform connecting multiple external APIs and AI services into a unified, scalable workflow.
- Designed request routing and response processing layers enabling clean data exchange between heterogeneous services.

ACHIEVEMENTS

- Built real-world autonomous AI agent (Jarvis) integrating Mistral AI with multi-step execution.
- Deployed production-grade AI WhatsApp Chatbot with 24/7 uptime.
- Solved 100+ LeetCode problems in C++ & DSA.

INTERESTS & HOBBIES

- Competitive Programming
- Building AI Projects
- Reading Tech Blogs
- Open Source Contributions
